THE POWER OF STARTING EARLY

Small Delays Can Lead To Bigger Investment Requirements

The illustration on the previous page highlights how the monthly investment required may increase when the investment journey begins later.

Example: *Target Corpus ₹1 Crore At Age 18 @12% assumed return*

Child's Current Age	Approximate Monthly SIP Required
0	₹14,000
1	₹16,000
2	₹18,000
3	₹21,000
4	₹24,000
5	₹28,000

What Does This Mean?

A delay of a few years may significantly increase the monthly investment required to work towards the same target corpus.

Starting early allows investments more time to potentially benefit from the power of compounding.

Key Takeaway

Time and consistency may be as important as the amount invested.

The earlier the journey begins, the more time your investments have to work towards your child's future goals.
